

Name: \_\_\_\_\_

Date: \_\_\_\_\_

# GED Vocabulary: Life Science

Complete the activity.

## ACROSS

- the part of the human brain that controls movement, coordination, and balance; located below the cerebrum at the base of the skull
- the largest part of the human brain, which coordinates all higher functions such as perception, thinking, and conscious activity
- change over time; usually refers to the development of new species over time
- the chemical process by which green plants convert water and carbon dioxide into food and oxygen using energy absorbed from sunlight or other light

## DOWN

- the cells produced as a result of cell division, each identical to the parent cell
- the tube through which air passes from the back of the mouth to the lungs; also called the windpipe
- a type of cellular respiration not requiring oxygen, in which food is broken down into carbon dioxide and alcohol, with the release of energy
- the process of artificially producing an exact genetic copy of an existing individual organism
