

Name: \_\_\_\_\_

Date: \_\_\_\_\_

# GED Vocabulary: Life Science

Complete the activity.

## ACROSS

- the part of the human brain that controls movement, coordination, and balance; located below the cerebrum at the base of the skull
- one of the upper chambers of the heart
- the chemical process by which green plants convert water and carbon dioxide into food and oxygen using energy absorbed from sunlight or other light
- the flat and broad tissue that forms a protective surface for your body
- the process by which certain bacteria in the soil change nitrates into gaseous nitrogen, returning it to the air

## DOWN

- the total mass of the living organisms in a particular place
- the process of artificially producing an exact genetic copy of an existing individual organism
- a rapid, automatic response to a condition in an organism's environment; for example, squinting in strong light
- a large artery that carries oxygen-rich blood from the heart to other parts of the body
- a change in an organism's DNA that causes a change in an inherited characteristic
