

Reducing Fractions - Part 1

✓ Means finding a fraction with a smaller
numerator and denominator

✓ Divide by the same number

$$\begin{array}{ccc} \textcircled{2} & \div & \textcircled{2} \\ \textcircled{4} & \div & \textcircled{2} \end{array} = \frac{\textcircled{1}}{\textcircled{2}}$$

$$\begin{array}{ccc} \textcircled{3} & \div & \textcircled{3} \\ \textcircled{6} & \div & \textcircled{3} \end{array} = \frac{\textcircled{1}}{\textcircled{2}}$$

$$\frac{\textcircled{6}}{\textcircled{9}} \div \frac{\textcircled{3}}{\textcircled{3}} = \frac{\textcircled{2}}{\textcircled{3}}$$

$$\frac{\textcircled{5}}{\textcircled{15}} \div \frac{\textcircled{5}}{\textcircled{5}} = \frac{\textcircled{1}}{\textcircled{3}}$$

$$\frac{\textcircled{7}}{\textcircled{21}} \div \frac{\textcircled{7}}{\textcircled{7}} = \frac{\textcircled{1}}{\textcircled{3}}$$
